

Skumatics, LLC develops and markets products and services for the Healthcare Supply Chain. Our focus is on developing simple and cost-effective solutions to improve business performance. We are committed to reducing your total medical-surgical product expense by using a two-pronged approach to drive supply chain efficiency.

### **Step 1. Consulting Services**

We develop and execute customer-specific account plans including---but not limited to---capturing savings through the audit of content and the improvement of the req-to-check process.

We employ process improvements with the capability to cause change in critical areas that include:

- Cycle-time reduction
- Elimination of non value-added steps
- Reduced rework
- Increased productivity
- Decreased cost
- Reduced reject and scrap rates
- Improved customer satisfaction

### **Step 2. Decision Support**

Supply Chain Transparency: Skumatics *goDash*

We create solutions that allow end users to aggregate data from different sources and develop key performance metrics that can be reached through a unified web portal with a single click of the mouse.

### Supply Chain Differentiation: Skumatics *eSynch*

We design and develop workflows and systems to continually maintain the accuracy of data by synchronizing it with data used by your vendors and group purchasing organizations.

### Supply Chain Collaboration: Skumatics *smartReq*

We extend your MMIS to support the efficient consumer response concept (ECR) as applied in healthcare, where clinicians, buyers, and material managers have access to point-of-use systems.

Skumatics, LLC is a solution provider for [GS1 Healthcare US](#) and a member of [UNSPSC](#).
